

eMail: Spamassassin Setup & Configuration

There are four basic options for Spamassassin:

1. **Off** - no filtering.
2. **Flag** - messages that Spamassassin suspects to be spam are flagged with *****SPAM***** in the header. You can then set your email program to move flagged messages to a spam folder for later review if you wish.
3. **Hold** - messages that Spamassassin believes to be spam are moved to a separate spam folder. If you wish to use this option please CONTACT US so we may setup an auto-delete function for the spam folder, otherwise it will quickly fill up and use your allotted mailbox storage. Once auto-delete is setup your spam will be saved for 7 days, so you can retrieve a message if one was mistakenly marked as spam.
4. **Delete** - messages that Spamassassin determines to be spam are deleted. Deleted messages are not retrievable, so a moderate score is suggested at first. We find 5 or 6 to be a good starting place for deleting message.

Flag Only Configuration

1. Select MAIL from the cpanel main menu.
2. Select SPAMASSASSIN.
3. Select CONFIGURE SPAMASSASSIN.
4. Enter *****SPAM***** into the rewrite_subject header field.
5. Click SAVE and then GO BACK.
6. Select ENABLE SPAM ASSASSIN.
7. Click GO BACK and then GO BACK again.
8. Click LOGOUT
